<p>EVPDave Moderator</p> <p>Joined: Mar 7th, 2007 Location: USA Posts: 160 Status: Offline</p>	<p>I thought I would revisit an experiment with my old Heathkit ultrasonic cleaner. When I fill the hopper with water and a wetting agent. Then suspend various aluminum objects in it while in operation, there are many strange sounds produced. I recorded two sessions so far with a DA200 recorder. I will release a few of the messages so far.</p> <p>The listening technique is to listen at very low volume level and then turn it up slightly as you hear the message. These are quite noisy.</p> <p>I hear a male voice speaking in a monotone</p> <p>"I'm testing from Jupiter"</p> <p>Attachment: 121910imtestingfromjupiter (2).mp3 (Downloaded 5 times)</p> <p style="text-align: center;"> Back To Top PM Quote Reply </p>

I have heard this term used before at the end of sessions.</p> <p>Same listening technique for this clip, listen at very low volume and then turn it up slightly as you hear the message.</p> <p>"Don Wilson here, transfer"</p> <p>Attachment: 121710donwilsonheretransfer.mp3 (Downloaded 5 times)</p> <p style="text-align: center;"> Back To Top PM Quote Reply </p>

This has been subjected to extra filtering but is unaltered in sequence and time. Notice how the voices flow one to the next.</p> <p>"Future delivered Tesla...He taught the living focus....Let people hear about Tesla"</p> <p>Attachment: 121710ultrasoniccleanerteslachatter2a.mp3 (Downloaded 6 times)</p> <p style="text-align: center;"> Back To Top PM Quote Reply </p>
